

Acceptable Novice CX Cases

In Novice CX, we will employ the NFHS Novice case limits with a slight revision, meaning that all teams should limit themselves to these four case areas: 2015-16 Novice Cases

- o REVISED - Pass a proposal to appoint a privacy advocate to appear before the FISA court, limit the PRISM database (which now collects Internet data), and allow U.S. Companies more leeway in disclosing orders they receive from the federal government.
- o Limit the FBI's use of entrapment and use of informants in Muslim communities.
- o Limit immigration enforcement by the U.S. Immigration and Customs Enforcement (ICE) using home and workplace raids, much as President Obama has proposed to do in his Executive Order — an Order that has been “stayed” by U.S. Federal District Judge Hanen. Most court observers believe that the appeal of Judge Hanen's ruling will take a long time, leading to an interesting public debate on the wisdom of aggressive immigration enforcement.
- o Limit the government's use of drone surveillance

Additionally, in novice CX, the negative cannot use Counterplans or Kritiks.
